Art Unit: 1711

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Cary et al in view of Cary et al taken with Wycech et al and Kagoshima et al.

Note that while Cary et al do recite whether the phosphoric acid used in their process is water free, it is deemed that patentees or anyone skilled in the art would use water free acid if water interfered with curing reaction. In any case there is no evidence on record to show that commercial available phosphoric acid would interfere with the curing reaction. Note also that in col. 4 lines 50 et. seq. where patentees discuss the use of boron trifluoride as a quick acting curing agent can be slowed down by an amount of water defined in the instant specification by applicants when they define the term "substantially" thus indicating that the more anhydrous the curing agent the faster its curing ability. In response to applicants' argument that superatmospheric pressure is used in order to foam there epoxy resins note col. 12 lines 56 et. seq. where it is indicated that the epoxy foams of their invention can be foamed at atmospheric pressure due to the exthermicity of the curing and foaming reaction. Applicants arguments with regard to the secondary references have been considered and it is deemed that the secondary references have not been used in combination with the primary reference to show the claimed process but to show that the claimed blowing agent, thermoplastic resins and the separation of the

Page 3 Application/Control Number: 09/300,930 Art Unit: 1711 resin are notoriously well known in the art and to use these materials in the process of the Carey et al reference would have been obvious to anyone skilled in the art. The factual inquiries set forth in Graham v. John Deere Co., 383 U.S. 1, 148 USPQ 459 2. (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows: 1. Determining the scope and contents of the prior art. 2. Ascertaining the differences between the prior art and the claims at issue. 3. Resolving the level of ordinary skill in the pertinent art. 4. Considering objective evidence present in the application indicating obviousness or nonobviousness. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a). A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Art Unit: 1711
